BEAUTY & THE BEAST: CULTIVATING BEAUTY THROUGH HEALTH

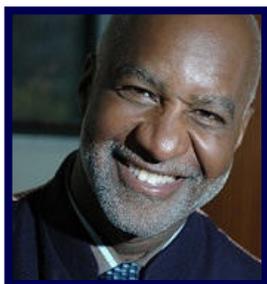

Presented by
Michael E. Greer, MD

March 22, 2014
Coeur d'Alene, ID

Dr. Greer will review, in detail, the actions and interplay of the principles involved in health and wellness. He guides participants in using key herbs, whole food nutrition, and minerals with careful patient monitoring by laboratory testing and clinical examination.

Michael Greer, MD, is an expert and teacher focused on integrative medicine. His mission is to provide a wide range of health practitioners

with a solid medical understanding of holistic, herbal, homeopathic, and naturopathic solutions for health. His teaching weaves together the best of conventional (allopathic) approaches with natural medicine philosophies.

Dr. Greer trained at Hahnemann Medical University in Philadelphia (now Drexel University College of Medicine), was board certified in OB-GYN, and was named Teacher of the Year at Swedish Hospital Family Practice Residency Program. In his transition to integrative medicine, he studied with numerous natural medicine experts. He retired from OB-GYN in 2011 and now lectures and consults exclusively for health care practitioners.

BEAUTY & THE BEAST: CULTIVATING BEAUTY THROUGH HEALTH

Thursday, February 13, 2014
Free Webinar from Noon - 1 pm PT

Introduction to Beauty and the Beast

Learning Objectives:

- * Explore skin anatomy and function and the relationship to aging
- * Learn key components in skin that respond and react to stress and UV radiation
- * Review the mechanisms of plant/herbal products and their role to protect against skin aging
- * Identify physical observations (hair, skin, nails) and their link to organ and system imbalances
- * Discuss the importance of estrogen, testosterone, and thyroid interaction and the consequences of too much or too little of each
- * Discover botanical extracts that support the health, texture, and integrity of the hair, skin, and nails
- * Putting it all together - dietary guidelines, effective protocols, and action plans
