The Truths and Myths of Gluten and Celiac Health

Presented by: **Michael E. Greer, MD**

Dr Greer is an excellent teacher. His knowledge from a naturopathic and homeopathic approach is outstanding.

-Richard J., MD

Gain up-to-date facts on this sensitivity.

One of the most hotly-debated, closely-scrutinized health topics in recent health reports has been the issue of gluten sensitivity, and celiac disease. The evidence is hard to miss – check out the line-up of gluten-free products in your common supermarket. This product line has grown exponentially within the past five years. Official health estimate of those with gluten sensitivity has risen from one in 10,000 to an astounding one in 133. It's estimated now that twenty million individuals in the US alone have gluten intolerance.

Dr. Greer will cover:

- How gluten-triggered autoimmune reactions and its related proteins play a role in depression, arthritis, thyroid diseases, cardiovascular disease, chronic skin disorders, and many other chronic problems.
- The difference between gluten sensitivity and Celiac disease.
- Why symptoms can vary greatly between those afflicted.
- How Celiac disease manifests in children, teens and adults.
- The historical perspective: when gluten was introduced.
- The triggers that cause the aberrant immune response.
- Causes, such as genetic pre-disposition, leaky small intestine and autoimmunity.
- How symptoms overlap irritable bowl syndrome and other gut-related dysfunction.
