# Natural Approaches to the Body's Inflammatory Response Function.

Essential Inflammation  
Infrastructure for  
the Chiropractic &  
Acupuncture Patient

Inflammation, Arthritis, Pain, Back Pain, Stress and Autoimmunity are all topics of major importance and need a very thorough understanding in the Chiropractic, Naturopathic and Acupuncture community. Back pain accounts for more than **\$100 billion** in annual U.S. healthcare cost and is the second leading cause of physician visits and hospitalizations. Conventional (allopathic) practitioners continue to treat all of the above conditions with pain medication while, at the same time, pain medications were involved in 14,800 overdose deaths in 2008 -- more than cocaine and heroin combined, and three times the rate in 1999. This seminar will detail the mechanisms for the initiation of pain and its subsequent initiation and propagation of autoimmune disease. A detailed cell physiology approach to this topic will provide a firm understanding for future patient care.

- ➔ Common Toxins and Basic Detoxification
  - ➔ Pain
    - ➔ Inflammation
      - ➔ Autoimmune Disease
        - ➔ Detoxification Systems
          - ➔ Rheumatoid and Osteoarthritis
            - ➔ Nutritional Assessment

## Michael E. Greer, MD

Dr. Greer, is an Integrative Health Provider relying on the best of conventional medicine and natural health principles. He holds an M.D. from the highly respected Hahnemann Medical University, practiced 20 years as one of Seattle's leading OB/GYNs, and over the last decade has developed an integrative medical practice incorporating naturopathic and homeopathic approaches.

In addition to prescribing pharmaceutical medications, Dr. Greer recommends natural bio-identical hormones, herbs, vitamins, minerals and nutritional supplements to promote holistic wellness. He manages a wide range of medical conditions but his clinical emphasis is on adrenal fatigue, thyroid dysfunction and estrogen dominance as a lynchpin of wellness, especially for middle-aged patients.
